

LogRhythm delivers an enterprise-class Security Intelligence Platform for managed service providers (MSP/MSSPs) that uniquely combines SIEM, Log Management, File Integrity Monitoring and Machine Analytics, with Host and Network Forensics, in a fully integrated solution. Using LogRhythm to drive your managed SIEM/Security Intelligence practice will enable you to:

- Expand and accelerate threat detection & response capabilities
- Deliver comprehensive compliance automation & assurance
- Reduce client implementation costs and management overhead
- Increase ROI while lowering TCO

LogRhythm is cost-effective, easily deployed, and scales to fit the complete needs of your customers. It is operated and managed through an easy-to-use, wizard-driven console and allows you to invest in a single solution to deliver comprehensive Security Intelligence to your entire customer base.

Managed SIEM /Security Intelligence Capabilities

Designed to address an ever-changing landscape of threats and challenges, LogRhythm arms you with a powerful arsenal of high-performance tools for security, compliance, and operations. LogRhythm delivers comprehensive, useful and actionable insight into what is really going on in and around an enterprise IT environment.

Powering your managed security and compliance operations with LogRhythm lets you reliably and efficiently deliver:

- Next Generation SIEM and Log Management
- Independent Host Forensics and File Integrity Monitoring
- Network Forensics with Application ID and Full Packet Capture
- State-of-the-art Machine Analytics
 - Advanced Correlation and Pattern Recognition
 - Multi-dimensional User / Host / Network Behaviour Anomaly Detection
- Rapid, Intelligent Search
- Large data set analysis via visual analytics, pivot, and drill down
- Workflow enabled automatic response via LogRhythm's SmartResponse™
- Integrated Case Management

Advanced Data Management for Multi-tenant Environments

Keeping your customers' data segregated without adding operational complexity and overhead or reducing capabilities is a challenge for any service provider. LogRhythm has industry-leading multi-tenancy capabilities, allowing you to protect customer data in multiple ways for maximum deployment flexibility. A unique logical entity structure allows you to provide cloud-based managed SIEM /Security Intelligence with full access to all customer data, while making it easy to ensure that individual customers can see only their own data. For those customers who require their raw log data and archives to remain completely separate from other organisations' data, any combination of virtual and/or appliance-based log managers can be allocated. Each Log Manager maintains its own online database of raw log data and controls how and where archives are stored. Each "tenant" retains its own online data store and archives, while discretionary access controls guarantee that confidential event data is viewed only by authorised users.

Why LogRhythm?

- Multi-tenant Data Management
- Flexible Deployment Options
- Simplified Central Management
- MSP/MSSP-specific Pricing
- Out-of-the-box Compliance Packages

Enterprise Architecture for MSP/MSSPs

LogRhythm reduces operational overhead for highly distributed environments, such as an MSP/MSSP customer base. It is easily maintained through centralised monitoring and management of all components and a highly scalable modular architecture makes additional growth quick and painless. LogRhythm provides you with:

- Hardware, Software and Virtual Appliance Options
 - Rapid and Extensive Scalability
 - High Availability Configurations
- Secure, Compressed Remote Collection
- Easy Installation, Operation and Administration
- Centralised Monitoring and Management of All Components
- Multi-tenancy to Meet Customer Requirements
 - Segregation of Customer Data
 - Granular, Role-Based Access

LogRhythm Labs

LogRhythm Labs' Knowledge Engineers help automate the process of turning raw data into actionable intelligence with relevant context, allowing MSP/MSSPs to provide enterprise correlation and meaningful visibility into the entire network. You will benefit from continuous research and development to provide your customers with:

- Comprehensive Device and Application Support
- Expert Event and Threat Level Identification
- Intelligent Alarms, Investigations and Reports
- Smart**Response**™ Scripts for Common Use Cases
- Out-of-the-Box, Up-to-Date Compliance Packages (PCI, SOX, HIPAA, FISMA, GPG 13, GLBA, NERC CIP, etc.)

Volume-based Pricing & Licensing

LogRhythm's volume-based pricing & licensing for MSP/MSSPs allows you to develop pricing that directly aligns to the usage of your customer base. The subscription pricing structure directly maps to volume consumption, providing a shared risk solution between LogRhythm and MSP/MSSP Partners. Partners appreciate the simplified price structure that better aligns with MSP/MSSP business models and provides consistency and predictability in license costs. This flexible licensing structure enables MSP/MSSPs to meet the needs of any enterprise, regardless of size and complexity.

LogRhythm's simplified volume-based pricing & licensing includes advanced LogRhythm features such as File Integrity Monitoring, Host Activity Monitoring, Geolocation, and real-time machine analytics via the AI Engine. Internal MSP/MSSP-oriented statistics directly align customer usage to billable output.
